EDUCATION

Baylor University, School of Engineering and Computer Science

Waco, TX

B.S. Data Science | GPA: 3.6/4.0

Aug 2023 – May 2027

- Minors: Mathematics, Business Administration
- Coursework: Data Structures & Algorithms, Computer Systems, Databases, Machine Learning, Cloud Computing

EXPERIENCE

Software Engineer, Test Reliability (Incoming)

Summer 2026

SpaceX — Raptor Engine Test Facility

McGregor, TX

Co-Founder & CTO

Dec 2025 – Mar 2026

Entry (tryentry.ai)

Remote

- Shipped 4-service production platform (Express API, Next.js frontend, FastAPI AI service, MCP for Claude Desktop) on Vercel + Railway
- Designed hybrid semantic search over 80M+ professional contacts using pgvector + 384-dim SentenceTransformers, combining vector similarity with keyword filters and collaborative/content recommendations
- Built resilient LLM natural-language query parser (15+ filter types via OpenAI structured outputs) with 2-tier Redis caching, circuit breaker, and \$20/day spend cap that maintained search availability through model outages

Software Engineering Co-op

May – Aug 2025

Keysight Technologies

Santa Rosa, CA (Remote)

- Open-sourced Particle Swarm Optimization framework for Keysight ADS that automated RF circuit design, collapsing 1–2 weeks of manual iteration into overnight runs
- Built real-time 3D Smith tube visualizer in PyQtGraph for 1,000+ optimization trajectory points per frequency, enabling visual debugging of non-convergence
- Integrated framework with Keysight ADS via AEL scripting and file I/O for fully automated end-to-end simulation workflows

Undergraduate Researcher

Jun 2025 – Present

Baylor SMART Hub

Waco, TX

- Engineered Dynamic Spectrum Access system in the 3.1–3.45 GHz CBRS band providing real-time interference protection for military radar while enabling commercial sharing across 350 MHz
- Developed Django-based SAS server with real-time geographic interference mapping, spectrum waterfall displays, and 1-second update intervals for multiple concurrent users

PROJECTS

Zo | *Python, TypeScript, Swift, Gemma, FastAPI, React*

Apr 2026

YC × Cactus × Google DeepMind Gemma Voice Agents Hackathon

- Built 24/7 multilingual on-device AI livestream shopping agent using Gemma E4B via Cactus runtime, reducing per-seller cloud costs from \$9,628/mo to \$144/mo (67× improvement)
- Designed three-tier pre-rendered MP4 architecture (idle loop + intent-matched clips + Wav2Lip lip-sync) keeping ~90% of responses fully on-device

SpaceX Daily News Digest | *Python, Claude API, GitHub Actions*

Mar 2026

- Built automated daily briefing pipeline scraping 7+ space news sources + curated X accounts, synthesizing via Claude API, and publishing static HTML to GitHub Pages with parallel fetching, deduplication, and resilient RSS/Nitter fallbacks

TECHNICAL SKILLS

Languages: Python, TypeScript/JavaScript, SQL, C++, Swift

Frameworks & Tools: FastAPI, Django, Next.js, React, Node.js/Express, Docker, PostgreSQL/pgvector, DuckDB, Redis, Vercel, Railway, GitHub Actions

AI/ML: Anthropic Claude API, OpenAI API, MCP, Ollama (local LLMs), SentenceTransformers, PyTorch, scikit-learn, NumPy, Pandas, SciPy
